

AND our new 5 Tonne Excavator

The wider cab provides an excellent view to the trench and surrounding work area. Keep cool and out of the dust with the factory optional enclosed cabin and air conditioning. In good weather the front windshield can be lifted out and stowed safely.

The large operator platform and wider threshold make it easy to step on and off. The clever 3 post design combines maximum strength an ease of access.

Hydraulic pilot controls give low effort, vibration free, accurate operation. Manipulators control the low pressure servo circuit that in turn opens the main control valves giving large excavator style operation.

Swing the boom wide to the right or left to dig in difficult-to-reach spots, against walls, or into corners that would otherwise require hand tools.

Introducing our new Wave Work Assist Vehicle

The WAVE replaces the need for rolling ladders and warehouse ladders that are typically used in warehouse and maintenance applications.

- Eliminates climbing, reduces lifting and allows travel at elevated heights
- Ideal for most indoor applications with quiet and easy operation and requires no set-up
- Includes a convenient load tray for safer and easier handling of tools, products or materials
- Only 30" wide, the WAVE can navigate almost any doorway or aisle
- It's designed to maneuver in and around busy work environments with a zero turning radius
- Simple, easy-to-use controls incorporate numerous ergonomic and efficiency features
- Transports the load, worker and itself in one fluid motion
- Outboard recharging system plugs into any standard, grounded 110V outlet

Load Tray Capacity—Approximately 90kg

Load Deck Capacity—Approximately 113kg

Platform Height—Approximately 4 metres
